For Top Profits Use ROHRER'S Quality Seeds

PURE

DEPENDABLE

HIGH QUALITY

CERTIFIED THORNE WHEAT

Beardless, stiff straw, medium in height. Good Yielder. One of the most popular varieties. Does not lodge easily. Red chaff, smooth head. Good milling quality. Performs good on wide range of soil. Sow 1½ bushels per acre; 2 bushels per acre on sandy soils.

CERTIFIED SENECA WHEAT

Beardless, stiff straw, slightly taller than Thorne, excellent standability. Tests show a trifle higher in yield than Thorne on the better soils; carries a higher test weight per bushel than most varieties. Excellent milling quality. Produces exceptionally well on average to good soils. Sow 1½ bushels per acre; 2 bushels per acre on sandy soils.

CERTIFIED PENNOLL WHEAT

One of the newest varieties. Tall with very stiff straw. Produces high yields of both grain and straw. Considered one of the highest yielders in Pennsylvania. Sow 1½ bushels per acre; 2 bushels per acre on sandy soils.

CERTIFIED WONG BARLEY

The most popular variety of winter barley. Beardless stiff straw—good variety of combining. Keep feed costs down by producing more of your own feed. Barley can be substituted for part corn in your feeding program. Sow 2 bushels per acre.

CERTIFIED KENBAR BARLEY

This is one of the newer varieties. Bearded—shorter in the straw than Wong. Higher in yield than smooth chaffed varieties. High weight per bushel. Ripens about four days earlier than Wong. Sow 2 bushels per acre.

CERTIFIED HUDSON BARLEY (NEW)

This is one of the most promising varieties of winter barley. This variety originated in New York state. Hudson is superior in winter hardiness, disease resistance, and yield. It has stiffness of straw which gives it good standability. The grain carries a very high weight test. The seed we are offering is New York grown. Supply is limited—order early to avoid disappointment. Sow 2 bushels per acre.

CERTIFIED LEE COLD PROOF WINTER OATS

Good yielder. Recommended for Southeastern Pennsylvania, Maryland, Delaware and New Jersey. Some yields reported up to 90-100 bushels per acre. Should be sowed earlier than barley. Sow 2½ bushels per acre.

LECONTE WINTER OATS

This is one of the newer varieties. Stiff straw—medium height. Excellent yielder of good quality grain. Not recommended for northern Pennsylvania. Should be used in the same general area as Lee Cold Proof. Sow 2½ bushels per acre.

BALBO RYE

This is an excellent variety for pasture, and can also be used for a cover crop. Sow 1½ to 2 bushels per acre.

TETRA PETKUS RYE

A superior type rye that originated in Germany. This rye has been developed by a highly specialized method of doubling the number of chromosomes in the plant cell. The yield of this rye is nearly twice the yield of ordinary rye. The grain produced is much larger (write for free sample). Tetra Petkus is excellent for pasture and silage. This rye can be sown in August and September and still be pastured through fall; then in the spring it can be pastured again or allowed to grow, and then cut for silage about the third week of May. This still allows time to plant corn or other crops. Tetra Petkus has excellent standability and produces a very high yield of straw in addition to its extremely high yield of grain. Don't fail to try this amazing new variety. Sow 2 bushels per acre.

ALFALFA

We have a good supply of Alfalfa, Northwestern, Certified Buffalo, Certified Ranger. We recommend starting new fields of alfalfa during the month of August. If stands are wanted for three years or longer, we suggest that you sow either Certified Buffalo or Certified Ranger. These are wilt-resistant varieties; Ranger is more winter hardy than Buffalo. Certified seed is more plentiful and prices are reasonable.

FANCY TIMOTHY

Our Fancy Timothy tests 99:60% pure or better. Practically free from weeds. The crop this year is considerably smaller than last year. Supplies are not too plentiful. Order your timothy along with your order for seed grains. We pay the freight on orders of 200 lbs. or more.

PASTURE MIXTURE AND GRASSES

September is an excellent time to start permanent pasture. We generally have more moisture and cooler weather during this time and grasses do not burn out as soon while they are in that seedling stage until they become deeper rooted. Many of the voluntary weeds that come up are frozen out before the grasses can be choked. Our permanent pasture mixture contains Timothy, Kentucky 31 Fescue, Perennial Rye Grass, Red Clover, Kentucky Blue Grass, Red Top, and Ladino Clover. Sow 20 pounds per acre.
